

Mohammadali Jabeti

Applied Data Science & AI student | Full-time internship from February 2027 (about 5 months)

Voorburg (Den Haag) | moalii237@gmail.com | moalii237.github.io | github.com/moalii237

PROFILE

I am a third-year Applied Data Science and AI student at BUas, looking for a full-time internship in data science, machine learning or AI from February 2027. Next to my studies I did freelance ML work for two Dutch clients, in computer vision and in speech-to-text, and I like taking a model all the way to something a client uses.

EDUCATION

BSc Applied Data Science and AI, Breda University of Applied Sciences Sep 2024 - expected 2028

Year 3 of 4: machine learning, deep learning, NLP, computer vision, MLOps. Student email: 244437@buas.nl

The internship runs through a BUas internship agreement (stageovereenkomst) as part of my study, so the employer needs no separate work permit (TWV).

WORK EXPERIENCE

Computer Vision Engineer (Freelance, Upwork), Dutch geodata company Jul 2026 - Aug 2026

- Built a pilot that detects fixed roadside obstacles and maps verge vegetation from survey-van camera frames, output as GeoJSON map layers. All 3 milestones accepted. Case study: github.com/moalii237/roadside-cv-pilot
- Wrote the annotation guidelines, labelled the data myself, split train/test by GPS location. Fine-tuned RF-DETR: AP50 went from 0.113 (the client's zero-shot model) to 0.361 on the same classes (3.2x), tree trunks from 0.125 to 0.821, on 13 held-out frames. Vegetation (frozen DINOv2): mIoU 0.438 to 0.818 on 8 held-out frames.
- When two model checks disagreed, I reviewed every detection marked wrong: 46 were real objects missing from the test labels. With them added, precision was 75%, in line with a manual check of 112 live detections.

NLP and Speech Recognition Engineer (Freelance), Dutch energy-sales call center Apr 2026 - Jun 2026

- Built a Dutch speech-to-text pipeline for sales calls (Whisper large-v3-turbo, pyannote diarization, LLM clean-up) and an evaluation harness. With Gemini (cloud) as the clean-up model: 88.2% F1 on 114 compliance keyword mentions in 2 hand-transcribed calls, zero invented text.
- The client wanted call data kept in-house, so I benchmarked 5 local open-weight LLMs against Gemini in 28 scored runs and built the final correction step on Qwen 2.5 7B. It fixes misheard names, suppliers and amounts using the customer's record from the client's API.

Freelance Software Developer 2025 - present

- **Euphoria**: CRM and point-of-sale desktop app I built for my family's tile and ceramics business, used there every day for sales, stock and invoices (Next.js, React, PostgreSQL, Electron).
- **bloomaflovers.nl**: Designed and deployed a live English and Dutch website for a flower studio.

Sales Assistant (part-time), Jack & Jones (BESTSELLER) Feb 2025 - present

Sales and customer service next to my studies, first in Breda, now at Westfield Mall of the Netherlands.

SELECTED STUDY PROJECTS

- **Computer vision to robotics (solo)**: U-Net segments roots (validation F1 0.88); a PID controller (80 Optuna trials) and a PPO reinforcement-learning agent move a simulated robot to each root tip with under 1 mm error.
- **Root segmentation study (solo)**: trained a ResUNet with 10 patch-size and overlap settings. On the 17-image validation set, 512 px patches cut root-length error from 24.3% to 14.5% compared with 128 px and ran about 9 times faster, and the setting with the best Dice score was not the one that measured length best.
- **EmotionScope (team of 7, course project)**: my part was the continuous-retraining loop and the command-line tool. It retrains on user corrections and only promotes a new model when its F1 beats the live one.

More projects (chatbots, NLP, time series, deep learning): moalii237.github.io

SKILLS AND LANGUAGES

Data: Python, SQL, pandas, NumPy, PostgreSQL, Power BI, Git

Machine learning: PyTorch, scikit-learn, TensorFlow, Hugging Face, OpenCV, Whisper, pyannote, Ollama, Gemini API

Deployment and apps: Docker, FastAPI, Azure ML, Next.js, React, TypeScript, Electron

Languages: English (fluent, language of my study), Dutch (basic, learning), Persian (native)
